

Vishal Rao

Cloud Solutions Consultant | Azure | DevOps | Linux | Automation

Cloud Solutions Consultant and Computer Engineer with experience across Azure cloud, networking, Linux and Windows administration, Active Directory, DevOps automation, disaster recovery, monitoring, security, and enterprise operations.

Core Skills

Cloud	Microsoft Azure, Azure Networking, Azure Compute, AKS, VM Scale Sets, App Service, Azure Monitor, Azure Site Recovery
DevOps / Platform	Linux, SSH, Git, Python, Docker, Kubernetes, Terraform, Azure CLI, YAML, Infrastructure as Code
Networking / Security	VNETs, Subnets, Peering, ExpressRoute, VPN Gateway, Load Balancers, DNS, Front Door, Private Link, Firewalls
Systems / Operations	Windows Server, Linux Administration, Active Directory, Azure AD, Patch Management, Backup and Recovery, Incident Management

Experience

Cloud Consultant - Hewlett Packard Enterprise

Designed and supported Azure compute and networking patterns, secure hybrid connectivity, Azure Monitor alerting, backup, recovery workflows, and structured incident handling.

Technical Consultant - Self-Employed

Delivered Linux and Windows administration, Active Directory support, patching, backup recovery, infrastructure health checks, Python and shell automation, and operational runbooks.

Software Engineer - HCLTech

Implemented infrastructure provisioning and deployment automation with Terraform, YAML pipelines, Azure CLI, Git, Docker, AKS deployment models, and troubleshooting across application, network, and OS layers.

Technical Solutions Specialist - Hewlett Packard Enterprise

Resolved enterprise incidents across server, storage, operating system, network, and access layers while supporting Windows Server, Linux, Active Directory, identity workflows, patching, and recovery.

Architecture Projects

- Azure landing zone and cloud foundation with hub-spoke networking, policy baselines, shared services, logging, RBAC, and Terraform templates.
- Hybrid connectivity and secure networking design using VNETs, ExpressRoute-ready patterns, VPN Gateway, DNS forwarding, Private Link, firewalls, and load balancing.
- Infrastructure automation with modular Terraform, remote state, Azure DevOps YAML gates, Azure CLI validation, and Git-based review flow.
- Containerized workloads on AKS with Docker images, ingress routing, namespace boundaries, secrets handling, rollout control, and Azure Monitor visibility.
- Cloud monitoring and recovery workflows with Log Analytics, metric alerts, backup policies, Azure Site Recovery planning, runbooks, and incident checkpoints.

Certifications

Microsoft Certified: Azure Fundamentals; Microsoft Certified: Azure Administrator Associate; Azure Networking Secure Access Certification; Google IT Support Specialization; Security in Google Cloud Platform Specialization; Networks and Communications Security; Career Essentials in System Administration.
